Please check the examination details bel	ow before enterir	ng your candidate information								
Candidate surname		Other names								
Centre Number Candidate No	umber									
Pearson Edexcel International Advanced Level										
Time 1 hour 20 minutes	Paper reference	WPH16/01								
Physics										
International Advanced Le	evel									
UNIT 6: Practical Skills in Physics II										
You must have:		Total Marks								
Scientific calculator, ruler										
		JL J								

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
 - there may be more space than you need.
- Show all your working out in calculations and include units where appropriate.

Information

- The total mark for this paper is 50.
- The marks for **each** question are shown in brackets
 - use this as a guide as to how much time to spend on each question.
- The list of data, formulae and relationships is printed at the end of this booklet.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Turn over ▶

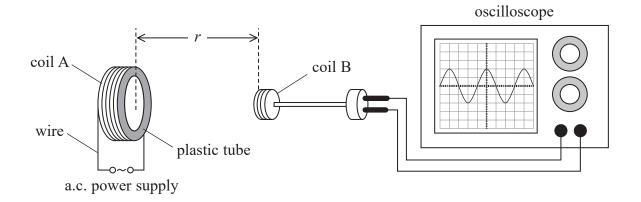

Answer ALL questions.

1 A student investigated the magnetic field produced by a current-carrying coil, coil A.

She made coil A by wrapping a wire around a plastic tube. Coil A was connected to an alternating current (a.c.) power supply.

A second coil, coil B, was placed in the magnetic field and connected to an oscilloscope as shown.

(ัล)	Describe of	one safety	issue	and how	it should	he deal	t with
۱	a_{j}	Describe (one salety	13340	and now	ii siiouiu	oc ucar	נוווייי

(2)

(b) The distance r between the two coils varied between 2 cm and 10 cm.

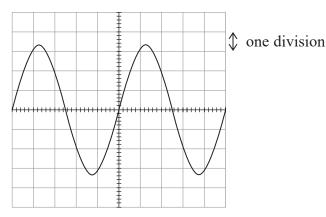

Explain why using Vernier calipers would be better than a metre rule to measure r.

You should include calculations in your answer.

(3)

(c) When the a.c. power supply was switched on, an e.m.f. E was induced across coil B. The variation in E is shown on the oscilloscope screen below.

The y-scale was set to 100 mV per division.

Describe how an accurate maximum value for E can be determined from the oscilloscope screen.

(3)

(d) The student measured values of r with Vernier calipers and determined corresponding maximum values of E.

The student's values are shown in the table.

<i>r</i> / cm	2	4	6	8
E/V	320	40	11.9	5

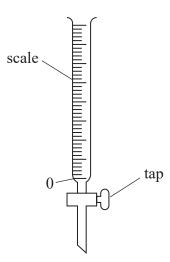

Criticise the recording of this data.

(2)

(Total for Question 1 = 10 marks)

2 A student used a transparent tube to measure a volume of liquid, as shown. Opening the tap allows liquid to flow out of the tube at a controlled rate.

When the tap is open, the volume V of liquid inside the tube decreases with time t according to the relationship

$$V = V_0 e^{-bt}$$

where V_0 is the initial volume of liquid in the tube and b is a constant.

(a) Explain why a graph of $\ln V$ against t should be used to test this relationship.

1	$^{\sim}$	1
ı	L	
1	_	,

Describe how the student could obtain an accurate set of values for	V and t to test
this relationship.	(4)
	(*)
(c) Explain a source of uncertainty in this investigation.	(2)
	(2)
(T-4-1 f O	uestion 2 = 8 marks)

3 A liquid is placed inside a closed container. Some of the liquid evaporates.

The pressure of the vapour above the surface of the liquid increases to a maximum value. This maximum pressure is called the saturated vapour pressure.

(a) The table shows data for the saturated vapour pressure P at different absolute temperatures T.

<i>P</i> / kPa	T / K	
7.8	308	
17.0	323	
34.6	338	
66.1	353	
120.1	368	
208.1	383	

(i) Plot a graph of $\log P$ against $\frac{1}{T}$ on the grid opposite. Use the additional columns for your processed data.

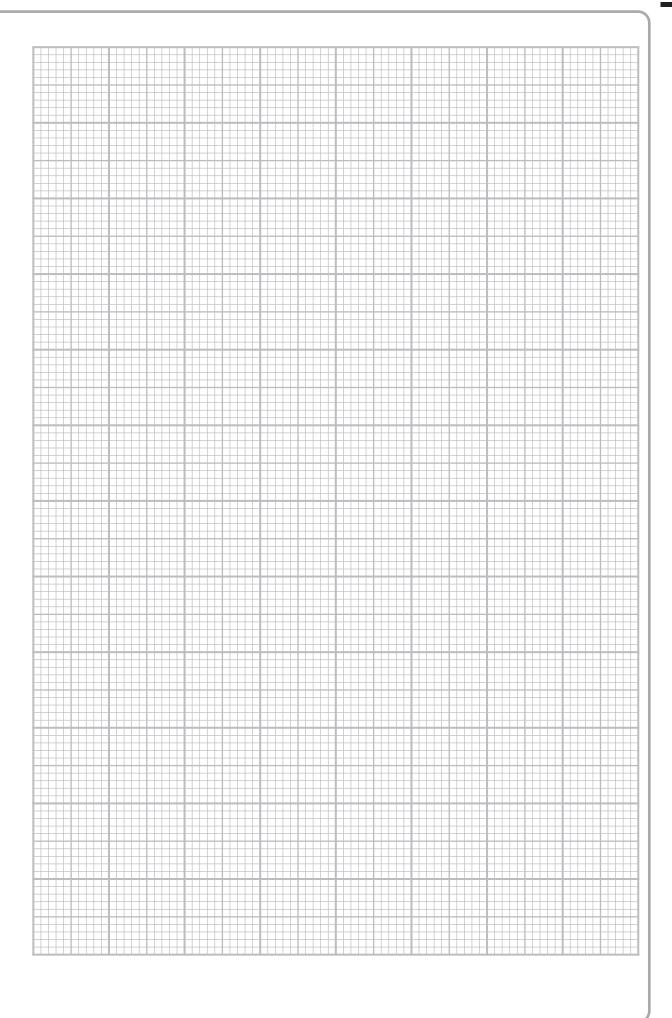

(6)

(ii)	Determine	the	gradient	of the	graph.

(3)

Gradient =

(iii) The gradient of the graph of $\log P$ against $\frac{1}{T}$ is given by

gradient =
$$-\frac{X}{2.30k}$$

where X is a constant with unit joules, and k is the Boltzmann constant.

Determine the value of X in joules.

(3)

X =	 J

(b) Liquids boil when the saturated vapour pressure is equal to atmospheric pressure.

Determine the boiling point of the liquid in ${}^{\circ}$ C when the atmospheric pressure is $100\,kPa$.

(3)

Boiling point =°C

(Total for Question 3 = 15 marks)

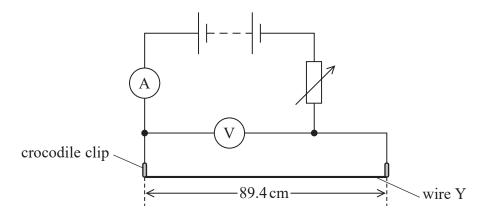

4	A student had two pieces o	f constantan	wire, X ar	nd Y.								
	Wires X and Y had different diameters.											
	(a) The student measured the diameter d_X of wire X several times using a micrometer screw gauge.											
	(i) Explain one measuring technique he should use.											
	<i>d</i> _X / mr	n 0.31	0.32	0.31	0.33	0.30						
	(3)											
	mm											

(3)

(b) The student measured the diameter d_Y of wire Y as $0.22 \,\mathrm{mm} \pm 0.01 \,\mathrm{mm}$.

He connected part of wire Y in a circuit as shown.

The student measured the potential difference V across the wire in the circuit and the current I in the wire.

He recorded the following values

$$V = 4.990 \text{ V} \pm 0.005 \text{ V}$$

 $I = 0.4570 \text{ A} \pm 0.0005 \text{ A}$

The length of wire Y in the circuit was $89.4\,\text{cm} \pm 0.1\,\text{cm}$.

(i) Show that the resistivity ρ of the metal is about $5 \times 10^{-7} \Omega$ m.

(ii) Show that the percentage uncertainty in ρ is about 9%.

(c) The student measured the resistances R_1 and R_2 of different lengths of wire Y using an ohmmeter. Each resistance was measured once.

The student's values are given in the table.

	Length / cm	Resistance / Ω
R_1	40.0	4.5
R_2	90.0	10.2

He calculated the resistance R_L for one metre of wire using the formula

$$R_L = 2 \times (R_2 - R_1)$$

Show that the percentage uncertainty in R_L is about 2%.

$$R_L = 11.4 \,\Omega$$

(3)

 |
| | | | | | | | | | | | | | | | | | | |

(d) The student wanted to confirm that the metal of the wire is constantan.

The student compared his calculated values of ρ and R_L to published values for constantan.

The values are shown in the table below.

	$ ho$ / $10^{-7}\Omega$ m	R_L / Ω
Calculated	4.6 ± 9%	11.4 ± 2%
Published	4.9	11.2

Comment on how well the student's calculated values confirm that the metal of the wire is constant.

You must include calculations in your answer.
